

# JumpCloud Cloud Insights

JumpCloud's Cloud Insights enables you to view user access activity in your public cloud infrastructure across multiple accounts. It provides a single console to monitor, troubleshoot, and gather data to maintain your public cloud security posture and help you meet your compliance needs.

## Gain Visibility Across Your Entire AWS Infrastructure

### Singular events feed for all management activity

Leverage a single cloud console for centralized monitoring of all management activity across your public cloud infrastructure.

### Intuitive interface to quickly assess activity

Get comprehensive visibility into who is doing what in the cloud with turnkey AWS account integration.

## Connect User Activity to Identity

### Review by access types

Monitor events by access type including single sign-on (SSO) connectors, identity and access management (IAM) connectors, and unmanaged activity through static credentials.

### Focus on events that matter

Filter events by identity, event type, or other attributes. Zoom in on user actions in the cloud by filtering out non-person entity activity.

## Strengthen Your Cloud Security Posture

### Continuous event gathering

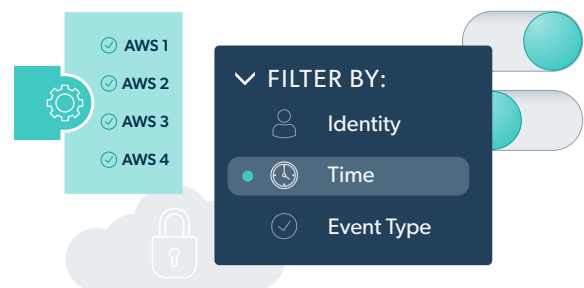

Improve your cloud security with continuous event ingestion, reviewing all types of user actions to assess risk and enact remediation plans.

### Streamline reporting

Easily gather evidence of user activity to demonstrate compliance with common standards such as SOC 2, PCI, NIST, and more.

## Key Features

- Integration with multiple AWS accounts to monitor activity across larger infrastructures.
- Management events feed with details on user actions in the public cloud infrastructure.
- Events filtering by identity, time, event type, and other attributes.
- Tagging of cloud access types based on connector, SSO, or unmanaged access.
- Simple non-person entity ("NPE") activity toggling.

Date	Identity	Action	Resource
