## Centralize G Suite Identity Management

Are you struggling with trying to go 'all cloud'? Are you forced to keep Active Directory® around because G Suite can't act as your core directory service and you don't want to resort to manually managing access control? Alternatively, maybe you don't even have AD and you are suddenly realizing your employees have disparate accounts and passwords across G Suite, their workstation, and various other applications and resources?

Go. All. Cloud.

JumpCloud's G Suite integration makes it simple to centralize your G Suite accounts with our cloud-based directory services. The result is that you are able to leverage a cloud-forward IT environment while your employees utilize a single, unified identity for all of their resources.

When you synchronize G Suite identities with JumpCloud, JumpCloud becomes the source of truth for that identity. This makes it possible for users to have one password that grants them access to Gmail and all Google services, their systems, networks, file servers, and on-prem and loud-based apps – managed from one single pane of glass.
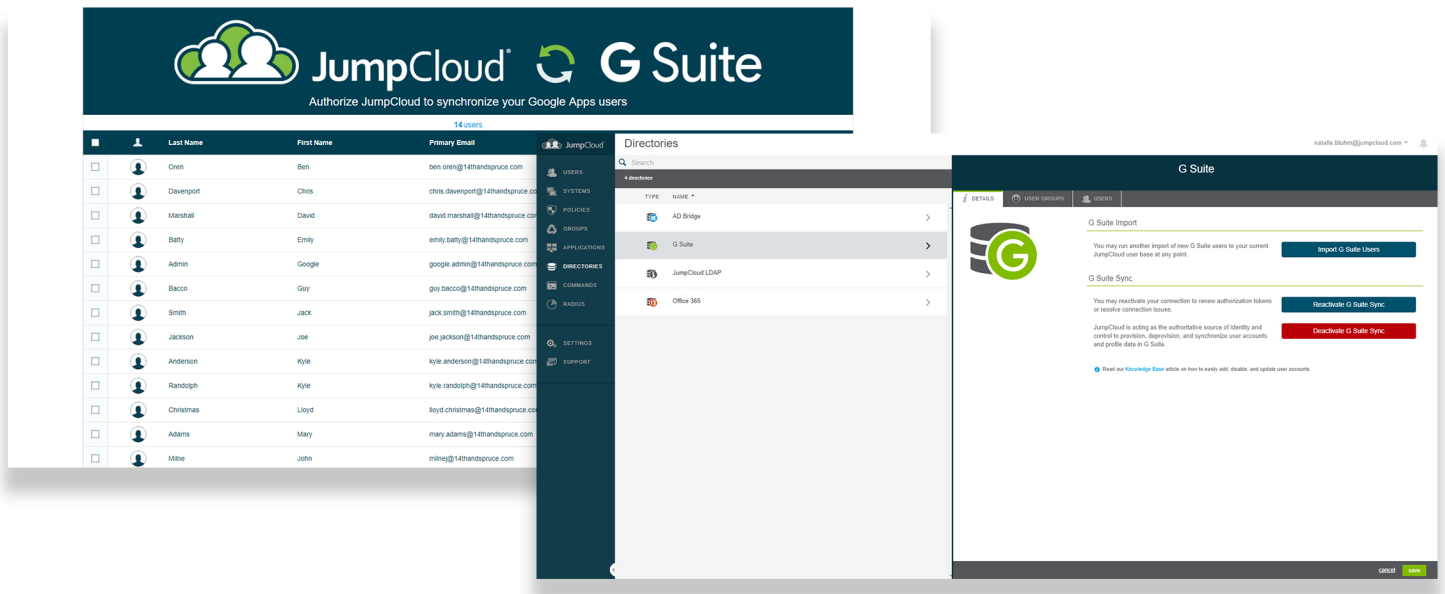

Features

- Utilize a secure OAuth-based API integration with no on-premises servers

- Unify G Suite identities with systems, cloud infrastructure, WiFi authentication, other applications, and more

- Leverage SAML-based single sign-on (SSO)

- Gain complete G Suite account lifecycle management: provisioning, importation, suspension

- Manage password complexity and rotation

"JumpCloud allows us to manage not only G Suite users, but also allows us to manage our network, system, and application access in one place."

– Ari Simon,
   Operations Manager

⊖ eusoh

JumpCloud leverages OAuth to maintain a secure, persistent connection between your G Suite tenant and JumpCloud's cloud-based directory services.

Benefits

- Experience a single point of control for G Suite identity management
- Enjoy freedom of choice to leverage your preferred infrastructure alongside Google solutions
- Shift completely to the cloud — email & productivity with G Suite, and directory services with JumpCloud
- Eliminate the need for on-premises Active Directory® server infrastructure

JumpCloud and G Suite change the game for IT admins — saving them time and stress while allowing their organizations to make the leap to the cloud. Whether you're moving to G Suite or you already have the platform in place, JumpCloud can help you streamline and secure your day-to-day identity management. Contact a JumpCloud team member or take advantage of a <u>free trial</u> to learn more.
