

JumpCloud | Office 365™ Integration

Centralize Office 365 Identity Management

Are you struggling with trying to go 'all cloud'? Do you find yourself implementing ADFS and Azure® AD Connect (DirSync) just to keep your Office 365 accounts in sync with your on-prem Active Directory®? Alternatively, maybe you don't even have an AD and you are suddenly realizing your employees have disparate accounts across Office 365, their workstation, and various other applications and resources?

Go. All. Cloud.

JumpCloud's deep integration with Office 365 makes it simple to centralize your Office 365 accounts with our cloud-based directory services. The result is a single, unified identity used for all the resources your employees need.

When you synchronize Office 365 identities with JumpCloud, JumpCloud becomes the source of truth for that identity. This makes it possible for users to have one password that grants them access to systems, networks, file servers, and applications – and for admins to have one pane of glass to manage it all.

Features

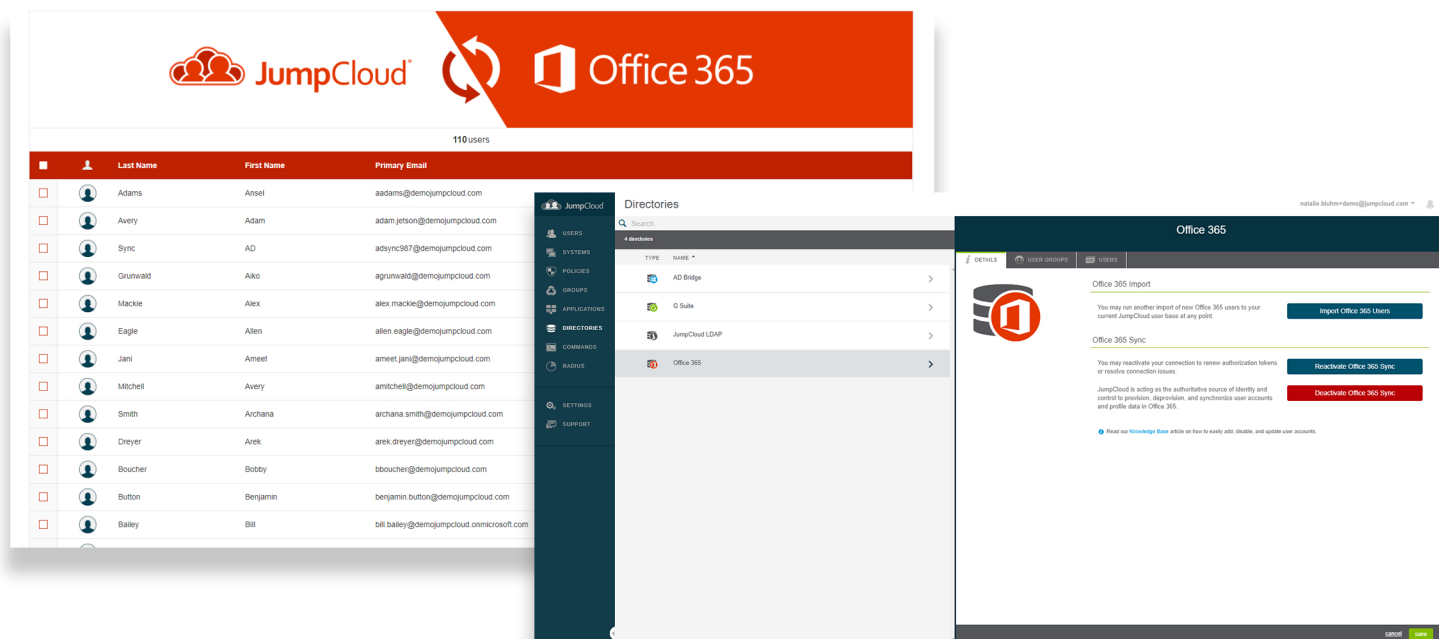

- Secure OAuth-based API integration requiring no on-premises servers
- Unify and extend Office 365 identities to systems, cloud infrastructure, WiFi authentication, other applications, and more
- SAML-based single sign-on (SSO) support
- Complete account lifecycle management: provisioning, importation, suspension
- Password complexity management and rotation support

“We’ve moved forward with Office 365 integration which is going really well. It’s good to have everything in a single pane of glass, and I’m glad we found JumpCloud.”

– Jeffrey Bailey, IT Director

Make Office 365™ Work for You

JumpCloud leverages the OAuth protocol to allow admins to import O365 users. From there, O365 identities can be managed in the JumpCloud admin console.

Benefits

- Single point of control for Office 365 identity management
- Freedom of choice to leverage your preferred infrastructure alongside Microsoft® solutions
- Completely shift to the cloud – email & productivity with Office 365, and directory services with JumpCloud
- No on-premises Active Directory® server or ongoing management required

JumpCloud and Office 365 change the game for IT admins – saving them time and stress while allowing their organizations to make the leap to the cloud. Whether you're moving to Office 365 or you already have the platform in place, JumpCloud can help you streamline your day-to-day identity management.
