

Protect and Fuel Your Business

with a Cloud Directory

Overcome Growth Roadblocks

Small and medium-sized businesses (SMBs) like yours are rapidly adopting cloud services. Without a cloud directory in place, however, SMBs quickly run into serious roadblocks:

- Painstaking password management
- Tedious onboarding/offboarding
- Lack of secure tool choices
- Risk of cyber attacks/data breaches

Cyber criminals are primarily targeting SMBs because they know security is weak and employee credentials are left unprotected. For every device and service that your employees need a password to access (email, WiFi, laptop, file servers, web applications, etc.), there's a security risk to address.

In 2019, 64% of SMBs claim to have suffered a cyber attack.

Take Charge with Modern IT

Connect all of the services and devices for each employee with a single, hyper-secure password.

- Improve employee productivity and work speed
- Fuel organizational efficiency
- Seal off cyber attacks
- Meet compliance regulations

You're In Good Hands

JumpCloud Partners provide the cloud directory as part of their overall managed service offering to protect and help organize your business. Contact your service provider to begin implementing JumpCloud's cloud directory with immediate benefits for your business.
