

# JumpCloud Password Vault

JumpCloud Password Vault provides a unified, cloud-first solution to secure and manage shared company credentials. Built on a scalable architecture, it eliminates identity and tool sprawl while reducing the risk of credential-based attacks across the organization.

By combining identity, access, device management, and credential vaulting into a single platform, it replaces fragmented point solutions with true platform consolidation. IT admins gain centralized visibility and granular control over critical application logins that lack native SSO support.

## Visibility and Control Over Every Asset

By moving from unmanaged, siloed password tools to a single, secure, cloud-based vault, you can drastically strengthen your security posture while stripping the complexity out of IT operations.

### Cloud-First Centralized Management

Replace weak, endpoint-dependent connections with a scalable, cloud-first architecture. This gives admins complete central control and uniform availability across all assets while eliminating sync failures.

### Administrator Ownership & Lifecycle Integration

Native directory integration empowers admins to take true ownership of corporate passwords, enabling seamless lifecycle management from instant onboarding access to secure credential reassignment and revocation during offboarding.

### Proactive Hygiene & Visibility

Enforce strict password practices globally using an automated generator, while a dedicated Health Dashboard gives IT teams full visibility to identify and remediate weak or compromised credentials.

### Audit & Compliance Ready

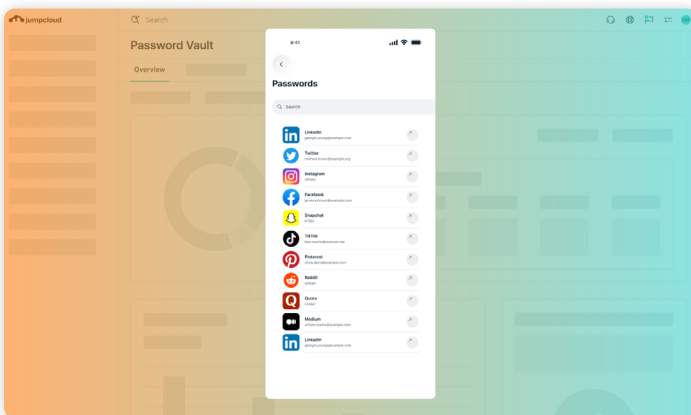

Continuously maintains immutable access logs for credential creation and sharing, providing the clear, automated documentation needed to easily satisfy strict frameworks like SOC 2 and HIPAA.

## Key Features

- **Centralized Enterprise Vault:** Administrators can centrally manage unlimited organization credentials in an encrypted, cloud-first environment.
- **Unified Mobile App Experience:** View and autofill passwords using JumpCloud Protect Mobile App enabling seamless login for end users. This unifies password management and user MFA in one place minimizing tool sprawl.
- **Unified Browser Extension Experience:** JumpCloud Go provides an all encompassing platform experience including Password Management, JumpCloud Go Authentication, SSO Access and SaaS management.
- **Login Without Credential Exposure:** Automatically populates credentials and signs users into websites and non-SSO applications via JC Go Extension, without exposing the credentials and boosting productivity.
- **Granular Sharing:** Share individual, and grouped credentials in addition to Folders with controlled collaboration, allowing admins to share credentials and non-sso websites with specific access levels: Auto-login, View secret, View details, or Manage (Full access).
- **Password Generator & Health Dashboard:** Generates unique, strong passwords and provides visibility into organization-wide password health on weak and old to reduce the risk of credential stuffing.
- **Audit Logs:** Tracks every credential access event to provide a complete history of activity for total governance using JumpCloud Directory Insights.

## Need Help Getting Started?

JumpCloud's Professional Services Team is here to support you along the way. Whether you need implementation assistance or hands-on engineering support, there's a service package for you.
